NSAppleScript Additions Reference

Inherits from	NSObject
Framework	/System/Library/Frameworks/AppKit.framework
Companion guide	Cocoa Scripting Guide
Declared in	NSAppleScriptExtensions.h

Overview

The Application Kit adds a method to the Foundation Framework's `NSAppleScript` class to handle rich text source. This method becomes part of the `NSAppleScript` class only for those applications that use the Application Kit.

For more information, see `NSAppleScript` in the *Foundation Framework API Reference*.

Tasks

Obtaining Source

- [richTextSource](#) (page 5)

Returns the syntax-highlighted source code of the receiver if the receiver has been compiled and its source code is available.

Instance Methods

richTextSource

Returns the syntax-highlighted source code of the receiver if the receiver has been compiled and its source code is available.

- (NSAttributedString *)richTextSource

Discussion

Returns `nil` otherwise. It is possible for an instance of `NSAppleScript` that has been instantiated with `initWithContentsOfURL:error:` to be a script for which the source code is not available, but is nonetheless executable.

Availability

Available in Mac OS X v10.2 and later.

Declared In

NSAppleScriptExtensions.h
