NSConditionLock Class Reference

Inherits from	NSObject
Conforms to	NSLocking NSObject (NSObject)
Framework	/System/Library/Frameworks/Foundation.framework
Availability	Available in Mac OS X v10.0 and later.
Companion guide	Threading Programming Guide
Declared in	NSLock.h
Related sample code	PhotoSearch QTAudioContextInsert QTAudioExtractionPanel Vertex Optimization

Overview

The `NSConditionLock` class defines objects whose locks can be associated with specific, user-defined conditions. Using an `NSConditionLock` object, you can ensure that a thread can acquire a lock only if a certain condition is met. Once it has acquired the lock and executed the critical section of code, the thread can relinquish the lock and set the associated condition to something new. The conditions themselves are arbitrary: you define them as needed for your application.

Adopted Protocols

NSLocking
lock
unlock

Tasks

Initializing an NSConditionLock Object

- [initWithCondition:](#) (page 7)
Initializes a newly allocated `NSConditionLock` object and sets its condition.

Returning the Condition

- [condition](#) (page 6)
Returns the condition associated with the receiver.

Acquiring and Releasing a Lock

- [lockBeforeDate:](#) (page 7)
Attempts to acquire a lock before a specified moment in time.
- [lockWhenCondition:](#) (page 8)
Attempts to acquire a lock.
- [lockWhenCondition:beforeDate:](#) (page 8)
Attempts to acquire a lock before a specified moment in time.
- [tryLock](#) (page 10)
Attempts to acquire a lock without regard to the receiver's condition.
- [tryLockWhenCondition:](#) (page 10)
Attempts to acquire a lock if the receiver's condition is equal to the specified condition.
- [unlockWithCondition:](#) (page 10)
Relinquishes the lock and sets the receiver's condition.

Accessor Methods

- [setName:](#) (page 9)
Assigns a name to the receiver.
- [name](#) (page 9)
Returns the name associated with the receiver.

Instance Methods

condition

Returns the condition associated with the receiver.

- `(NSInteger)condition`

Return Value

The condition associated with the receiver. If no condition has been set, returns 0.

Availability

Available in Mac OS X v10.0 and later.

Declared In

NSLock.h

initWithCondition:

Initializes a newly allocated NSConditionLock object and sets its condition.

```
- (id)initWithCondition:(NSInteger)condition
```

Parameters

condition

The user-defined condition for the lock. The value of *condition* is user-defined; see the class description for more information.

Return Value

An initialized condition lock object; may be different than the original receiver.

Availability

Available in Mac OS X v10.0 and later.

QTAudioExtractionPanel

Vertex Optimization

Declared In

NSLock.h

lockBeforeDate:

Attempts to acquire a lock before a specified moment in time.

```
- (BOOL)lockBeforeDate:(NSDate *)limit
```

Parameters

limit

The date by which the lock must be acquired or the attempt will time out.

Return Value

YES if the lock is acquired within the time limit, NO otherwise.

Discussion

The condition associated with the receiver isn't taken into account in this operation. This method blocks the thread's execution until the receiver acquires the lock or *limit* is reached.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [lockWhenCondition:beforeDate:](#) (page 8)

Declared In

NSLock.h

lockWhenCondition:

Attempts to acquire a lock.

```
- (void)lockWhenCondition:(NSInteger)condition
```

Parameters

condition

The condition to match on.

Discussion

The receiver's condition must be equal to *condition* before the locking operation will succeed. This method blocks the thread's execution until the lock can be acquired.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [lockWhenCondition:beforeDate:](#) (page 8)

- [unlockWithCondition:](#) (page 10)

Declared In

NSLock.h

lockWhenCondition:beforeDate:

Attempts to acquire a lock before a specified moment in time.

```
- (BOOL)lockWhenCondition:(NSInteger)condition beforeDate:(NSDate *)limit
```

Parameters

condition

The condition to match on.

limit

The date by which the lock must be acquired or the attempt will time out.

Return Value

YES if the lock is acquired within the time limit, NO otherwise.

Discussion

The receiver's condition must be equal to *condition* before the locking operation will succeed. This method blocks the thread's execution until the lock can be acquired or *limit* is reached.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [lockBeforeDate:](#) (page 7)
- [lockWhenCondition:](#) (page 8)

Related Sample Code

PhotoSearch

Declared In

NSLock.h

name

Returns the name associated with the receiver.

- (NSString *)name

Return Value

The name of the receiver.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [setName:](#) (page 9)

Declared In

NSLock.h

setName:

Assigns a name to the receiver.

- (void)setName:(NSString *)*newName*

Parameters

newName

The new name for the receiver. This method makes a copy of the specified string.

Discussion

You can use a name string to identify a condition lock within your code. Cocoa also uses this name as part of any error descriptions involving the receiver.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [name](#) (page 9)

Declared In

NSLock.h

tryLock

Attempts to acquire a lock without regard to the receiver's condition.

- (BOOL)tryLock

Return Value

YES if the lock could be acquired, NO otherwise.

Discussion

This method returns immediately.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [tryLockWhenCondition:](#) (page 10)

Declared In

NSLock.h

tryLockWhenCondition:

Attempts to acquire a lock if the receiver's condition is equal to the specified condition.

- (BOOL)tryLockWhenCondition:(NSInteger)*condition*

Return Value

YES if the lock could be acquired, NO otherwise.

Discussion

As part of its implementation, this method invokes [lockWhenCondition:beforeDate:](#) (page 8). This method returns immediately.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [tryLock](#) (page 10)

Declared In

NSLock.h

unlockWithCondition:

Relinquishes the lock and sets the receiver's condition.

- (void)unlockWithCondition:(NSInteger)*condition*

Parameters

condition

The user-defined condition for the lock. The value of *condition* is user-defined; see the class description for more information.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [lockWhenCondition:](#) (page 8)

Declared In

NSLock.h

Document Revision History

This table describes the changes to *NSConditionLock Class Reference*.

Date	Notes
2007-01-15	Updated for Mac OS X v10.5.
2006-05-23	First publication of this content as a separate document.
