NSScriptWhoseTest Class Reference

Inherits from	NSObject
Conforms to	NSCoding NSObject (NSObject)
Framework	/System/Library/Frameworks/Foundation.framework
Availability	Available in Mac OS X v10.0 and later.
Companion guide	Cocoa Scripting Guide
Declared in	NSScriptWhoseTests.h

Overview

`NSScriptWhoseTest` is an abstract class whose sole method is [isTrue](#) (page 6). Two concrete subclasses of `NSScriptWhoseTest` generate objects representing Boolean expressions comparing one object with another and objects representing multiple Boolean expressions connected by logical operators (OR, AND, NOT). These classes are, respectively, `NSSpecifierTest` and `NSLogicalTest`. In evaluating itself, an `NSWhoseSpecifier` invokes the [isTrue](#) (page 6) method of its “test” object.

You shouldn't need to subclass `NSScriptWhoseTest`, and you should rarely need to subclass one of its subclasses.

Adopted Protocols

NSCoding
 encodeWithCoder:
 initWithCoder:

Tasks

Evaluating a Test

- [isTrue](#) (page 6)
Returns a Boolean value that indicates whether the test represented by the receiver evaluates to YES.

Instance Methods

isTrue

Returns a Boolean value that indicates whether the test represented by the receiver evaluates to YES.

- (BOOL)isTrue

Return Value

YES if the test represented by the receiver evaluates to YES, otherwise NO.

Availability

Available in Mac OS X v10.0 and later.
