Preface About This Book xix

What to Read xxi
Chapter Organization xxii
Conventions Used in This Book xxii
Special Fonts xxiii
Types of Notes xxiii
Assembly-Language Information xxiii
Numerical Formats xxiv
Development Environment xxiv
Developer Products and Support xxiv

Chapter 1 Introduction to AppleTalk 1-1

About Networking on the Macintosh 1-3
AppleTalk Networking 1-4
Basic AppleTalk Networking Concepts 1-4
Addressing and Data Delivery on AppleTalk Networks 1-6
AppleTalk Connectivity 1-9
AppleTalk Phase 2 1-10
The AppleTalk Protocol Stack 1-11
AppleTalk Filing Protocol (AFP) 1-12
Zone Information Protocol (ZIP) 1-12
AppleTalk Session Protocol (ASP) 1-13
AppleTalk Data Stream Protocol (ADSP) 1-13
AppleTalk Transaction Protocol (ATP) 1-13
AppleTalk Echo Protocol (AEP) 1-14
Name-Binding Protocol (NBP) 1-14
Routing Table Maintenance Protocol (RTMP) 1-15
Datagram Delivery Protocol (DDP) 1-15
Link-Access Protocols 1-15
Multivendor Architecture 1-16
Multinode Architecture 1-16
How the AppleTalk Protocols Are Implemented 1-16
The AppleTalk Manager 1-18
AppleTalk and the OSI Model 1-19
Application Layer 1-19
Presentation Layer 1-20
Session Layer 1-20

Transport Layer 1-21
Network Layer 1-21
Data-Link and Physical Layers 1-21
Deciding Which AppleTalk Protocol to Use 1-22
Making Your Application Available Throughout the Internet 1-22
Identifying Zones 1-23
Using a Session Protocol to Send and Receive Data 1-24
AppleTalk Data Stream Protocol 1-24
AppleTalk Session Protocol 1-25
Performing a Transaction 1-25
Sending and Receiving Data as Discrete Packets 1-26
Measuring Packet-Delivery Performance 1-26
Accessing AppleShare and Other File Servers 1-27
Receiving Packets Using a Virtual Node and Processing Them in a Custom Manner 1-27
The LAP Manager 1-27
Directly Accessing a Driver for a Network Type 1-28
The AppleTalk Pascal Interface 1-29
Executing Routines Synchronously or Asynchronously 1-30
Polling the Result Field 1-31
Using a Completion Routine 1-31

Chapter 2 AppleTalk Utilities 2-1

About the AppleTalk Utilities 2-3
Using the AppleTalk Utilities 2-4
Determining Whether AppleTalk Phase 2 Drivers Are Supported 2-4
Getting Information About the .MPP Driver and the Network Environment 2-4
Getting the Address of Your Node or Your Local Router 2-6
Sending Packets to Applications and Processes on Your Own Node 2-6
Selecting a Node in the Server Range 2-7
AppleTalk Utilities Reference 2-8
Data Structures 2-9
MPP Parameter Block 2-9
Routines 2-11
Obtaining Information About the .MPP Driver and the Current Network Environment 2-11
Enabling Intranode Delivery of DDP Packets 2-15
Getting the Addresses of Your Node and Local Internet Router 2-17
Opening and Closing Drivers 2-18
Summary of AppleTalk Utilities 2-23
Pascal Summary 2-23
Constants 2-23
Data Types 2-23
Routines 2-24

C Summary 2-25
Constants 2-25
Data Types 2-25
Routines 2-26
Assembly-Language Summary 2-27
Constants 2-27
Data Structures 2-28
Result Codes 2-28

Chapter 3 Name-Binding Protocol (NBP) 3-1

About NBP 3-3
Using NBP 3-6
Registering Your Entity With NBP 3-7
Setting Up a Names Table Entry 3-8
Registering a Names Table Entry 3-9
Handling Names Table Entry Requests 3-12
Preparing an Entity Name 3-12
Looking Up a Name 3-13
Extracting a Name From a List of Returned Names 3-16
Confirming a Name 3-17
Removing an Entry From the Names Table 3-18
Canceling a Request 3-19
NBP Reference 3-20
Data Structures 3-20
Address Block Record 3-20
Names Table Entry Record 3-21
Entity Name Record 3-21
The MPP Parameter Block for NBP 3-22
Routines 3-23
Registering an Entity 3-24
Handling Name and Address Requests 3-28
Summary of NBP 3-40
Pascal Summary 3-40
Constants 3-40
Data Types 3-40
Routines 3-42
C Summary 3-42
Constants 3-42
Data Types 3-43
Routines 3-45
Assembly-Language Summary 3-46
Constants 3-46
Data Structures 3-47
Result Codes 3-48

Chapter 4 Zone Information Protocol (ZIP) 4-1

About ZIP 4-3
Using ZIP 4-4
Getting the Name of Your Application's Zone 4-6
Getting a List of Zone Names for Your Local Network or Its Internet 4-7
ZIP Reference 4-10
Data Structures 4-10
The XPP Parameter Block for ZIP 4-10
Routines 4-11
Obtaining Zone Information 4-12
Summary of ZIP 4-19
Pascal Summary 4-19
Constants 4-19
Data Types 4-19
Routines 4-20
C Summary 4-20
Constants 4-20
Data Types 4-21
Routines 4-21
Assembly-Language Summary 4-22
Constants 4-22
Data Structures 4-22
Result Codes 4-23

Chapter 5 AppleTalk Data Stream Protocol (ADSP) 5-1

About ADSP 5-3
Connections, Connection Ends, and Connection States 5-6
Connection Listeners 5-7
Reliable Delivery of Data 5-8
Unsolicited ADSP Events 5-8
About ASDSP 5-9
The Authentication Process 5-10
The Data Encryption Feature 5-11
Using ADSP 5-11
Allocating Memory for ADSP 5-12
Creating and Using a Connection Control Block 5-12
Opening and Maintaining an ADSP Connection 5-13
Creating and Using a Connection Listener 5-22
Writing a User Routine for Connection Events 5-26
Using ASDSP 5-29
Opening a Secure Connection 5-30
From the Initiator's End 5-30

From the Recipient End 5-32
Sending Encrypted Data Across a Secure Connection 5-34
ADSP Reference 5-35
Data Structures 5-35
The ADSP Connection Control Block Record 5-35
The Address Block Record 5-38
The DSP Parameter Block 5-38
The ASDSP Parameter Block 5-41
The TRSecureParams Record 5-42
Routines 5-43
Establishing and Terminating an ADSP Connection 5-44
Establishing and Terminating an ADSP Connection Listener 5-63
Maintaining an ADSP Connection and Using It to Exchange Data 5-69
Summary of ADSP 5-77
Pascal Summary 5-77
Constants 5-77
Data Types 5-78
C Summary 5-82
Constants 5-82
Data Types 5-84
Assembly-Language Summary 5-90
Constants 5-90
Data Structures 5-92
Result Codes 5-94

Chapter 6 AppleTalk Transaction Protocol (ATP) 6-1

About ATP 6-3
The ATP Packet Format 6-5
At-Least-Once and Exactly-Once Transactions 6-7
The Buffer Data Structure 6-8
ATP Flags 6-8
Using ATP 6-9
Writing a Requester ATP Application 6-9
Creating a Buffer Data Structure 6-12
Specifying the Parameters for the Send Request Function 6-12
Writing a Responder ATP Application 6-14
Opening and Setting Up a Socket to Receive Requests 6-14
Responding to Requests 6-16
Canceling an ATP Function 6-19
ATP Reference 6-20
Data Structures 6-20
The Buffer Data Structure 6-20
The ATP Parameter Block 6-21
The Address Block Record 6-23

Routines 6-23
Sending an ATP Request 6-24
Opening and Closing an ATP Socket 6-30
Setting Up a Socket to Listen for Requests 6-32
Responding to Requests 6-34
Canceling Pending ATP Functions 6-38
Building a Buffer Data Structure 6-44
Summary of ATP 6-46
Pascal Summary 6-46
Constants 6-46
Data Types 6-46
Routines 6-48
C Summary 6-49
Constants 6-49
Data Types 6-50
Routines 6-53
Assembly-Language Summary 6-54
Constants 6-54
Data Structures 6-55
Result Codes 6-58

Chapter 7 Datagram Delivery Protocol (DDP) 7-1

About DDP 7-3
About Sockets and Socket Listeners 7-4
Assigning Socket Numbers 7-6
DDP Client Protocol Types 7-7
Obtaining Data From the Network 7-8
Using DDP 7-8
Sending and Receiving Data: An Overview 7-9
Opening a Socket 7-9
Sending Data 7-10
Receiving Data 7-10
Creating a DDP Write-Data Structure 7-12
Using Registers and Packet Headers 7-13
How the .MPP Driver Calls Your Socket Listener 7-13
The DDP Packet and Frame Headers 7-14
The MPW Equates 7-16
Reading an Incoming Packet 7-17
Using Checksums 7-19
A Sample Socket Listener 7-20
Socket Listener Queues and Buffers 7-20
Setting Up the Socket Listener 7-22
Initializing the Socket Listener 7-24
Processing a Packet 7-25
Testing for Available Packets 7-31

Measuring Packet-Delivery Performance 7-32
DDP Reference 7-34
Data Structures 7-34
The Write-Data Structure 7-35
The Address Block Record 7-35
MPP Parameter Block 7-36
Routines 7-37
Opening and Closing DDP Sockets 7-37
Sending DDP Datagrams 7-40
Summary of DDP 7-44
Pascal Summary 7-44
Constants 7-44
Data Types 7-44
Routines 7-45
C Summary 7-46
Constants 7-46
Data Types 7-46
Routines 7-47
Assembly-Language Summary 7-48
Constants 7-48
Data Structures 7-49
Result Codes 7-50

Chapter 8 AppleTalk Session Protocol (ASP) 8-1

About ASP 8-3
ASP Reference 8-6
Data Structures 8-6
XPP Parameter Block for ASP 8-6
Routines 8-8
Opening and Closing ASP Sessions 8-9
Sending Commands and Writing Data From the Workstation to the Server 8-15
Obtaining Information About ASP's Maximum Capacities and the Status of the Server 8-21
Canceling an ASP Request to Open a Session 8-25
Summary of ASP 8-27
Pascal Summary 8-27
Constants 8-27
Data Types 8-27
Routines 8-29
C Summary 8-29
Constants 8-29
Data Types 8-30
Routines 8-31
Assembly-Language Summary 8-32

Constants 8-32
Data Structures 8-33
Result Codes 8-35

Chapter 9 AppleTalk Filing Protocol (AFP) 9-1

About AFP 9-3
AFP Reference 9-5
Data Structures 9-5
AFP Command Block Record 9-5
XPP Parameter Block 9-6
Routines 9-8
Summary of AFP 9-26
Pascal Summary 9-26
Constants 9-26
Data Types 9-27
Routines 9-29
C Summary 9-29
Constants 9-29
Data Types 9-31
Routines 9-32
Assembly-Language Summary 9-33
Constants 9-33
Data Structures 9-34
Result Codes 9-36

Chapter 10 Link-Access Protocol (LAP) Manager 10-1

About the LAP Manager 10-3
Using the LAP Manager 10-5
Determining if the LAP Manager Is Installed 10-5
Adding an Entry to the AppleTalk Transition Queue 10-7
How the LAP Manager Calls Your Transition Event Handler Routine 10-9
Writing a Transition Event Handler Routine Using Pascal 10-11
Open Transition 10-13
Prepare-to-Close Transition 10-14
Permission-to-Close Transition 10-15
Cancel-Close Transition 10-17
Network-Connection-Change Transition 10-17
Flagship-Name-Change Transition 10-21
Permission-to-Change-Flagship-Name Transition 10-22
Cancel-Flagship-Name-Change Transition 10-23
Cable-Range-Change Transition 10-24

CPU-Speed-Change Transition 10-25
Developer-Defined Transitions 10-26
Defining Your Own AppleTalk Transition 10-27
The LAP Manager and 802.2 Protocol Packets 10-27
Attaching and Detaching 802.2 Protocol Handlers 10-30
LAP Manager Reference 10-32
Data Structures 10-33
The AppleTalk Transition Queue Entry 10-33
Routines 10-33
Adding and Removing AppleTalk Transition Queue Entries 10-34
Notifying Routines When Your Application-Defined Transition Occurs 10-37
Attaching and Detaching 802.2 Protocol Handlers 10-39
Summary of the LAP Manager 10-43
Pascal Summary 10-43
Constants 10-43
Data Types 10-43
Routines 10-44
C Summary 10-44
Constants 10-44
Data Types 10-45
Routines 10-45
Assembly-Language Summary 10-45
Constants 10-45
Data Structures 10-46
Result Codes 10-46

Chapter 11 Ethernet, Token Ring, and Fiber Distributed Data Interface 11-1

About Ethernet, Token Ring, and FDDI Support 11-3
About Multivendor Network Interface Controller (NIC) Support 11-5
About Multicast Addressing 11-7
Using Ethernet, Token Ring, and FDDI Drivers 11-7
Using the Ethernet Driver 11-7
Opening the Ethernet Driver 11-8
Using a Write-Data Structure to Transmit Ethernet Data 11-10
Using the Default Ethernet Protocol Handler to Read Data 11-13
Using Your Own Ethernet Protocol Handler to Read Data 11-17
Changing the Ethernet Hardware Address 11-19
Using the Token Ring Driver 11-20
Applying Ethernet Functions 11-20
Sending and Receiving Data 11-21
Using the FDDI Driver 11-23
Applying Ethernet Functions 11-23

Sending and Receiving Data 11-24
Ethernet, Token Ring, and FDDI Reference 11-25
Data Structures 11-26
The Write-Data Structure 11-26
The Parameter Block for Ethernet, Token Ring, and FDDI Driver Functions 11-26
Routines 11-28
Attaching and Detaching an Ethernet Protocol Handler 11-28
Writing and Reading Ethernet Packets 11-32
Obtaining Information About the Ethernet Driver and Switching Its Mode 11-36
Adding and Removing Ethernet Multicast Addresses 11-40
Summary of Ethernet, Token Ring, and FDDI 11-43
Pascal Summary 11-43
Constants 11-43
Data Structures 11-43
Routines 11-44
C Summary 11-45
Constants 11-45
Data Types 11-45
Routines 11-46
Assembly-Language Summary 11-47
Constants 11-47
Data Structures 11-47
Result Codes 11-48

Chapter 12 Multinode Architecture 12-1

About Multinode Architecture 12-4
Using Multinode Architecture 12-8
Acquiring and Removing Multinodes 12-8
Handling an AppleTalk Cable-Range-Change Transition Event 12-10
Receiving Packets Addressed to Your Multinode 12-10
Calling ReadPacket to Read in the Packet Contents 12-12
Calling ReadRest to Complete Reading in the Packet Contents 12-13
Sending Packets Using a Multinode 12-14
Preparing a Write-Data Structure 12-14
Using a Checksum 12-16
Multinode Architecture Reference 12-17
Data Structures 12-18
The Write-Data Structure 12-18
The Address Block Record 12-18
The Multinode Parameter Block 12-19
Routines 12-20
Adding and Removing Multinode Addresses 12-21
Sending Datagrams Through Multinodes 12-25

Summary of Multinode Architecture 12-28
Pascal Summary 12-28
Constants 12-28
Data Types 12-28
C Summary 12-30
Constants 12-30
Data Types 12-30
Assembly-Language Summary 12-31
Result Codes 12-32

Glossary GL-1
